

Mesh inner tent

Insect-free airiness

It's not much fun socialising or trying to sleep if insects are greedily trying to suck your blood. That's when well-designed equipment is needed to keep mosquitoes and other insects out while maintaining good ventilation inside the tent.

Our mosquito net inner tents give optimal insect protection and are also more airy than our ordinary inner tents. They have openings fitted with zips which makes it easy to adjust the outer tent's air intakes and they are especially good together with a Nordic tipi of cotton/polyester where condensation is ventilated out through the tent fabric.

The most important function of an inner tent in a lightweight tent is to keep out condensation that forms on the tent walls. As well as giving extra protection against insects, our airy mosquito net inner tents also have the advantage of improving the indoor climate on hot summer days and nights.

IT Solo pitching kit is used to put up an inner tent (whole or half) without the Nordic tipi. This is a practical solution in warm conditions but remember that a mosquito net inner tent is neither rainproof nor storm-resistant.

Tentipi

- has its roots in Swedish Lapland – the homeland of the Sami kåta
- stands for passion and expertise, especially when it comes to Nordic tipis
- has three decades of experience as the world-leading manufacturer of Nordic tipis
- has several patents and design rights for its original, ingenious design
- cares so deeply about its products that it only makes its Nordic tipis in its own fully-owned factories
- exposes every fifth tent to a full-scale rain test
- views every Nordic tipi as a unique product and gives it a personal ID to make it possible to track its components and specific design
- cares about previous customers by always striving to make new features also fit the older models of tents.

Key features

- Available in two versions: whole or half
- Give full protection against insects since the floor is integrated
- Reduce condensation from damp ground since the floor covers the entire or half of the bottom area of the tent
- Can be pitched without the outer tent when only insect protection is wanted
