

Stake puller 30-60

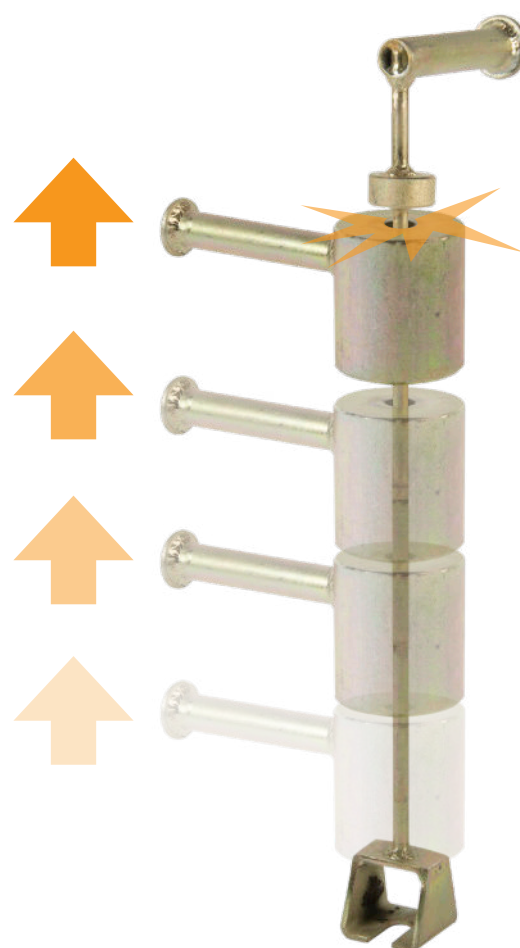

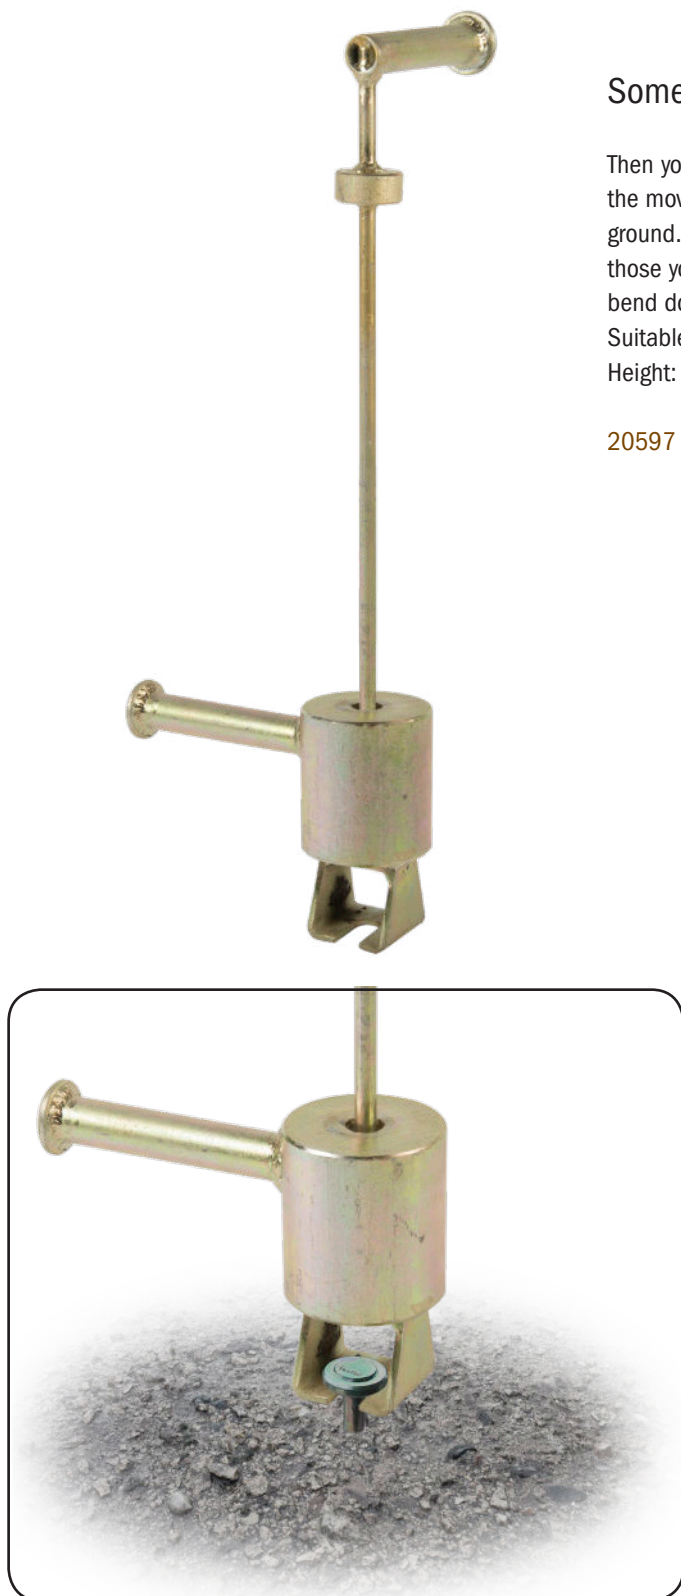

A helping hand

Tentipi 
authentic nordic tipis since 1989

Sometimes the ground doesn't want to let go!

Then you will find our stake puller very useful. One or more upward blows with the movable weight will enable you to easily extract any stake from any type of ground. It's so simple to use that you will soon be using it for all stakes, even those you might have been able to extract yourself. Since you don't need to bend down, the stake puller prevents injuries and improves work posture. Suitable for our 30-60 centimetre stakes. Made of surface treated steel. Height: 64 cm. Weight: 6.75 kg.
